Providing privacy with Grade A laminated safety glass

Viridian **VLam™ Translucent**, **VLam™ Translucent Grey** and **VLam™ Soft White** are becoming popular for screening and privacy applications. With a frosted appearance made by bonding two or more sheets of glass together with a PVB interlayer, the result is a durable glazing material that can be used for a variety of applications. As the translucent interlayer is contained between the two sheets of glass, the product does not fingerprint and is easy to clean.

Description

As with Viridian **DécorPattern™** glass, where privacy is an important consideration, this product is appropriate for obscuring vision and diffusing light.

VLam Translucent has a white appearance and a light transmission of 68%.

VLam Translucent Grey has a frosted grey appearance and a light transmission of 32%.

VLam Soft White has a light frosted appearance and a light transmission of 80%.
